Here, we will describe how to modify the Live2D avatar.

Software version used

Live2D: 5.0.03 (free version)
gimp: 2.10.36
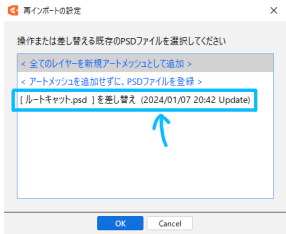

How to use Root Cat B's coloring.

1. Open "Rootcat.cmo3" with Live2d.
2. While clicking on "Root Cat B.psd", bring it to the top of the Live2D screen and release the click.

3. When the "Please select a model to operate or import PSD" window appears, select "Root Cat (Model)".
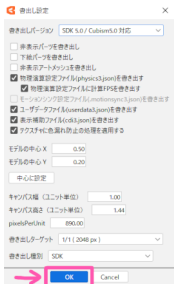

4. When the "Please select an existing PSD to operate or replace" window appears, select "Replace [rootcat.psd]".

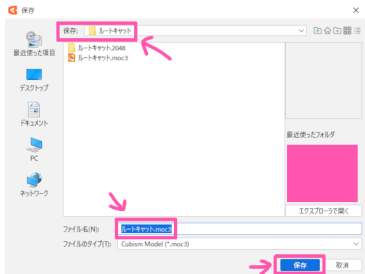

5. After confirming that the coloring has changed, click "File" -> "Export embedding file" -> "Export moc3 file" in the upper left of Live2D.

6. When the "Export Settings" window appears, press "OK".

7. When the Save window appears, click Save, remembering where it will be saved.

8. If the "The specified file already exists" window appears, click "Yes".

確認   ×

指定のファイルは既に存在しています

ルートキャット¥ルートキャット¥ルートキャット.moc3

上書きしますか？

はい(Y)   いいえ(N)   取消

9. When the "Do you want to overwrite rootcat.model3.json?" window appears, click "No".

確認   ×

ルートキャット.model3.jsonを上書きしますか？

「いいえ」を選択するとmoc3のみ上書きされます。
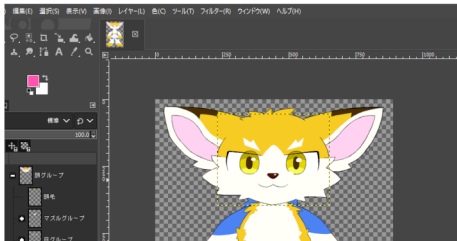

はい(Y)   いいえ(N)

10. This completes the modification.
To use it in VTube Studio, please follow the steps in "How to install it in VTube Studio" in "Instructions.txt".

How to change color design

1. Open "rootcat.xcf" in GIMP.
Or open "Rootcat.PSD" with an app that can edit PSD.

2. Live2D avatars have separate parts for each body.
Change the color of each one. The image is a GIMP example.

3. Once completed, export it in PSD format.

4. Using the completed PSD format file, follow the steps starting from [1.] of "How to use Root Cat B's coloring."
